

nProtect GameGuard

Online game security solution to protect client and to prevent hacking for establishing safe online game environment

Outline

Online game security solution to protect client and to prevent hacking for establishing safe online game environment

Functions

Client Protection

- Provide a tool for executable file encryption
- Detect and block process memory modification in real time
- File protection by using self-encryption algorithm

Server Authentication

- Self-protection and executable file modification detection
- Detect non-client bot

Hack Tool Detection

- Detect speed hack by system monitoring
- Detect wall hack by graphics API monitoring
- Detect macro by analyzing activity-based program
- Detect malicious process and DLL injection

Others

- Detect illegal free server and block the unauthorized access from other countries
- Select whether or not to close the client for hack detection

Features

Web Security Function Setting

- Setting various security functions on web control system

Rapid Reaction for Issues

- Build modules to block hack tools temporarily by using hack tool pattern system for emergency
- Provide a log analysis tool to identify error causes
- 1:1 technical support by game

Report

- Real time statistics for error and hacking tool by country, game, OS, and type.
- Analyze error causes through log searching

Convenience

- Monitor during CBT (Closed Beta Test.), OBT (Open Beta Test) and provide reports
- Security consulting to optimize security functions by monitoring and analyzing logs

System Requirements

Category	Details
Software	Windows 2000 / XP / Vista / 7 / 8 / 8.1 / 10 (support 32, 64bit)
Hardware	Pentium 4.2Ghz / RAM 1GB / HDD 40GB and higher
